PROFILUX LED 110/DMX/02

The ProfiLux LED 110/DMX/02 is the new, tiny, compact and powerful RGB-LED light with 213 lumen and a beam angle of 25°.

The compact LED-light (Ø = 75. 2 mm) has a high quality stainless steel housing and is suitable for fresh water, pool water and sea water application (for definition see page 232). Equipped with a temperature control and a thermal protection, the LED light can also be installed dry. The lifetime of these lights is up to 100,000 h.*
The light is supplied with a bracket for ground installation as well as for nozzle tube mounting (designed for socket 10 (51018)). The RGB-LED light has a 1 mtr. long connecting cable with a waterproof hybrid (power/data) connector. The ProfiLux LED light can be controlled via DMX with the underwater LED Driver/

DMX/02 (50720) (not in scope of supply). The basic colours of the LED-RGBW-lights are measured individually for their brightness. The LED-Driver ensures equal brightness for all lights in the system, thereby creating a homogeneous colour combination.

Product characteristics at a glance
- Energy efficient LED-RGB-light with bracket for ground installation and nozzle tube mounting.
- 213 Lumen with a beam angle of 25°, max. 6 Watt
- Temperature controlled high quality LED for an extra-long life of up to 100,000 h.*
- Wet and dry installation – water proof in accordance with IP68
- For fresh water, pool water and sea water
- External electronic in a separate control box / junction box – waterproof connector, easy to connect.
- DMX/RDM-capable in combination with the Underwater LED Driver/DMX/02 (50720)
- Individual measurement of the basic colours of the LED-RGBW lights and the use of the Underwater LED Driver/DMX/02 (50720) guarantees equal brightness of all lights in the system and a homogeneous colour combination.
- Galvanic isolation between the DMX and 24V DC power
- Stroboscope effect

*In case of underwater application, an intelligent heat management and quality LED enables a lifetime of up to 100.000 hrs. This claim does not entitle to a guarantee.

INNOVATION – MADE BY OASE
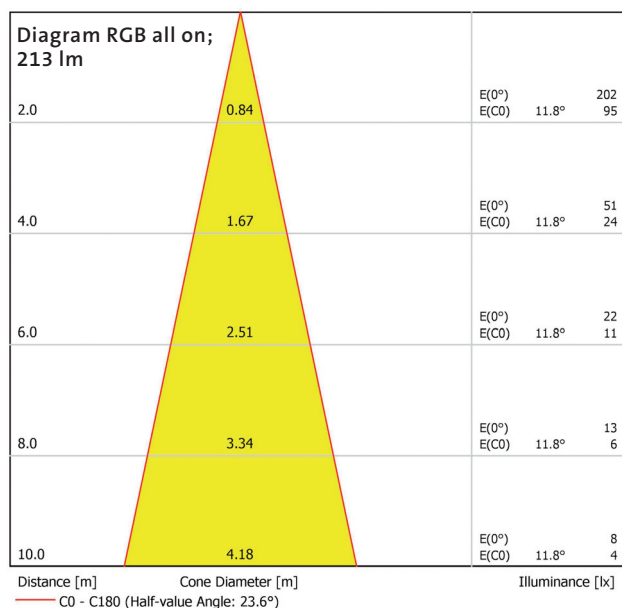

NEW

ProfiLux LED 110/DMX/02

The variety of colour combinations and the stroboscope effect reveal their full effect in combination with dynamic water effects which can be generated, for eg. , with the Vario-Switch or the Varionaut pumps. Together, they create completely new compositions on open spaces and in fountains.

The Underwater LED Driver/DMX/02 (see page 148) is required for a DMX/RDM-capable application of the Profi-Lux LED light . In addition a RDM-capable controller , like WECS II (WECS II 512, WECS II 1024 or WECS II 2048, see page 156-165), is also needed.

The ProfiLux-LED light has a 1 mtr. long connecting cable with a hybrid connector for connecting it to the Underwater LED Driver/DMX/02. A 3.0 mtr. or 7.5 mtr. hybrid extension cable per light can be used for extending the connection
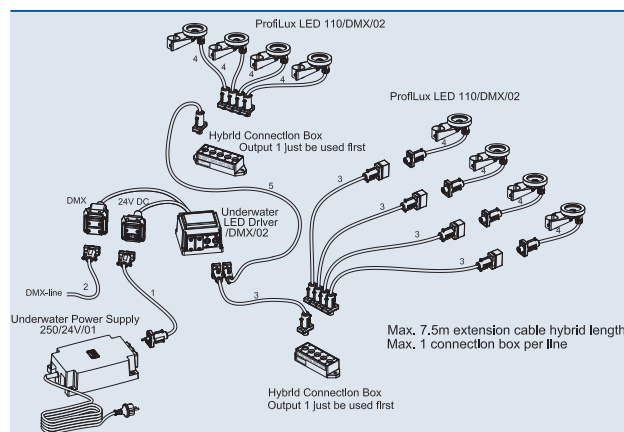

(see page 146). Up to 4 LEDs can be individually controlled with this external Underwater LED-Driver. The Underwater LED Driver/DMX/02 is equipped with two connection boxes – one for the power supply with 24V DC and the other one for a DMX/RDM-data cable. The special connection technology makes a watertight pluggable cabling possible.

The use of the hybrid connection box can lead to an economic advantage of the system. The lights which are connected to the hybrid box always have the same colour. (see system diagram.)
